Bamboowood Products

Zero Defect - Zero Effect

BUILDING DREAMS, LIVING GREEN!

► **ABOUT US**

In a world chasing sustainability—Mutha Industries takes pride in bringing green initiatives to your home. **EPITOME—a premium range of bamboowood products are the answer to responsible civilizations for the future.**

Our mission is to revolutionize indoor and outdoor products by bringing India its first eco-friendly options. Built on cutting edge Research and Development— our products are fully made from

bamboo —yet have the same experience of hardwood. Feel. Look. Design. Durability. All wrapped into one eco-friendly solution. Here's your key to the future.

Mutha Industries is part of the Anil Mutha Group which courts diverse interests in the capital market, real estate and wind energy.

► **WHY BAMBOO?**

Bamboo is by far the fastest growing natural resource in the world. It grows to maturity in just 4-5 years—that ensures you don't need to cut trees, which take decades to mature.

One-hectare of broad leaf forest produces 750 Kg of oxygen compared to 1350 kg of oxygen by one hectare of bamboo forest. India boasts of a rich 11 million hectare bounty of bamboo plantations.

The rate of its biomass generation is unsurpassed in the plant kingdom. Quite simply, it is one of the most important non-wood forestry products on the planet.

► **PRODUCTION FACILITY**

Our finest Bamboowood is produced in a sprawling state-of-the-art manufacturing facility. Spread across 10 acres in the Bamboo Park in Agartala, Tripura—it boasts of a wide population of over 15 species of bamboo, being one of the most important bamboo cultivation regions of India.

It is here that Mutha Industries empowers local farmers to grow bamboo and gain prosperity. Our 250+ strong team of talented individuals run the facility and are ably guided by a panel of experts. They identify only the highest grade of bamboo for each batch.

This produces **EPITOME—Bamboowood products** that are environmentally friendly, natural and stronger than most hardwood products in the market. We at Mutha Industries endeavour for brilliance and wish to lead India into the future with our innovative offerings. Our aim is to manufacture the highest quality of Bamboowood.

► HOW ITS MADE

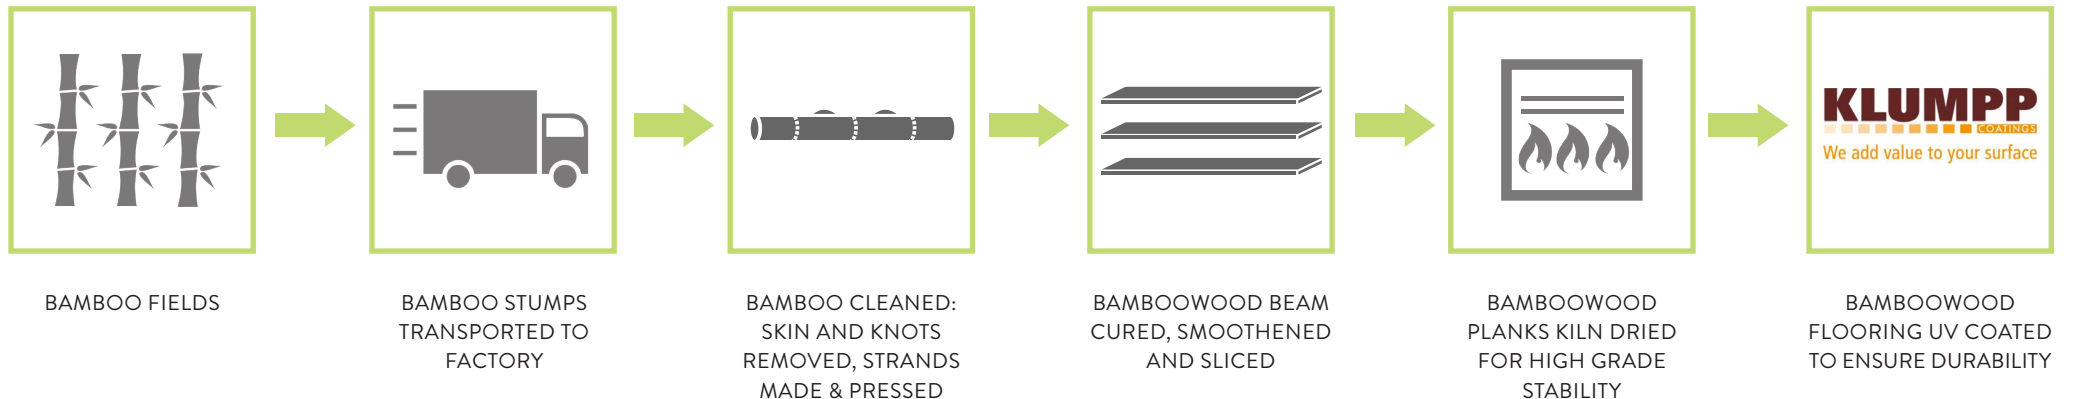

Our team of experts visits our cultivation areas for hand-selection of mature bamboo. The bamboo is then carefully transported to the factory.

a. Primary: The bamboo is cleaned while its skin and knots are removed. It is then sliced into strips and crushed into strands—fibres that will come together for further treatment.

b. Secondary: The bamboo strands are then cured—naturally and artificially for strength. These strands are then compressed at high pressure to create bamboowood beams.

c. Tertiary: The beams are then smoothed out and sliced into different thicknesses for flooring, decking or wall cladding. The bamboowood planks return to be seasoned naturally and artificially (kiln dried) for high grade stability.

Finishing: Bamboowood planks are then coated with state of the art UV/PU/HydraOil coating specially imported from Italy, Germany. This process is repeated painstakingly to ensure robustness and durability.

▶ **BAMBOOWOOD**

A stunning invention, Bamboowood offers the sheen, durability and luxurious finish of hardwood—but without the ecological damage. Its beauty and finish lend a resplendent aura to any residence, office space or recreational arena. Its renewable qualities allow for a cleaner planet.

Saving the Earth does not mean you have to sacrifice on style. Make a choice to leave behind a cleaner legacy for the coming generations—and look good while doing so.

► APPLICATIONS

- Flooring
- Wall Panelling
- Ceiling
- Outdoor Products- Decking
- Outdoor Products- Cladding
- Door & Windows
- Wainscoating
- Bespoke Round Pole
- Baffle
- Furniture
- Stairs & Railing
- Structure

► ADVANTAGES

- Eco-friendly
- No compromise on style
- Luxuriant choices of shades and dyes
- High customizability
- High resistance to moisture
- Biodegradable & fully recyclable
- Termite-resistant

► FLOORING

Combining exotic beauty and supreme durability Epitome Bamboowood Flooring represents a renewable alternative to traditional hardwood flooring

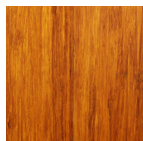

- **THICKNESS - 14/16/18 MM**
- **FINSH- UV COATED**
